

**IN THE CLAIMS:**

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1, 2, 3, 6, 7, 10, 11, 12, 15, 16, 19, 20 and 22, and ADD new claims 24 and 25 in accordance with the following:

1. (CURRENTLY AMENDED) An information processing apparatus, comprising:  
a memory having a first memory area for storing a plurality of teaching material elements including text, video and/or audio data, and having a second memory area for storing teaching material presentation patterns;

first processor ~~means~~-for providing a questionnaire to a user and analyzing an answer to said questionnaire to determine a trait of said user related to personality, and for determining a teaching material presentation pattern for said user in accordance with said determined trait of said user to store the determined teaching material presentation pattern in said second memory area;

second processor ~~means~~-for retrieving said teaching material presentation pattern for said user from said second memory area, selecting and editing ones of a plurality of teaching material elements of a specific subject in said first memory area in accordance with said teaching material presentation pattern to generate a teaching material module, and presenting said teaching material module to said user in accordance with said teaching material presentation pattern; and

third processor ~~means~~-for analyzing learning behavior of said user during a learning process of said user using said presented teaching material module in accordance with said teaching material presentation pattern, modifying said teaching material presentation pattern in accordance with said analysis, and storing said modified presentation pattern in said second memory area.

2. (CURRENTLY AMENDED) The information processing apparatus according to claim 1, wherein said second processor ~~means~~-further retrieves said modified teaching material presentation pattern for said user from said second memory area, selects and edits ones of said

plurality of teaching material elements of said specific subject in said first memory area in accordance with said modified presentation pattern to generate another teaching material module, and presents said other teaching material module to said user in accordance with said modified presentation pattern.

3. (CURRENTLY AMENDED) The information processing apparatus according to claim 1, wherein said third processor ~~means~~-stores a record of said learning behavior of said user in said second memory area, and analyzes said stored record of the learning behavior of said user.

4. (ORIGINAL) The information processing apparatus according to claim 1, wherein said teaching material presentation pattern defines specific magnitudes related to difficulty, required time and dissimilarity of the teaching material elements.

5. (ORIGINAL) The information processing apparatus according to claim 1, wherein said questionnaire comprises first and second portions, and said second portion of said questionnaire is determined depending on an answer to said first portion of said questionnaire, and is provided after said first portion of said questionnaire is provided.

6. (CURRENTLY AMENDED) The information processing apparatus according to claim 1, wherein said first processor ~~means~~-analyzes the answer to said questionnaire to further determine a trait of said user related to general life attitude.

7. (CURRENTLY AMENDED) The information processing apparatus according to claim 6, wherein said first processor ~~means~~-determines said trait of said user related to learning attitude in accordance with said personality trait and said trait of general life attitude.

8. (ORIGINAL) The information processing apparatus according to claim 1, wherein said teaching material element is a video clip.

9. (ORIGINAL) The information processing apparatus according to claim 1 being connected to an information processing terminal over a network for providing said questionnaire and said teaching material module to said information processing terminal.

10. (CURRENTLY AMENDED) A program stored in a recording medium for use in an

information processing apparatus, said information processing apparatus comprising a memory and a processor, said memory having a first memory area for storing a plurality of teaching material elements including text, video and/or audio data, and having a second memory area for storing a teaching material presentation pattern, said program enabling said processor to ~~perform the steps of:~~

providing a questionnaire to a user and analyzing an answer to said questionnaire to determine a trait of said user related to personality;

determining a teaching material presentation pattern for said user in accordance with said determined trait of said user to store the determined teaching material presentation pattern in said second memory area;

retrieving said teaching material presentation pattern for said user from said second memory area, selecting and editing ones of a plurality of teaching material elements of a specific subject in said first memory area in accordance with said teaching material presentation pattern to generate a teaching material module, and presenting said teaching material module to said user in accordance with said teaching material presentation pattern; and

analyzing learning behavior of said user during a learning process of said user using said presented teaching material module in accordance with said teaching material presentation pattern, modifying said teaching material presentation pattern in accordance with said analysis, and storing said modified presentation pattern in said second memory area.

11. (CURRENTLY AMENDED) The program according to claim 10 further enabling said processor to ~~perform the step of retrieving~~ retrieve said modified teaching material presentation pattern for said user from said second memory area, selecting and editing ones of said plurality of teaching material elements of said specific subject in said first memory area in accordance with said modified presentation pattern to generate another teaching material module, and presenting said other teaching material module to said user in accordance with said modified presentation pattern.

12. (CURRENTLY AMENDED) The program according to claim 10, further enabling said processor to ~~perform the step of storing~~ store a record of said learning behavior of said user during the learning process of said user using said presented teaching material module of the specific subject in accordance with said teaching material presentation pattern in said second memory area, wherein ~~the step of analyzing~~ analysis of learning behavior comprises analyzing

said stored record of the learning behavior of said user.

13. (ORIGINAL) The program according to claim 10, wherein said teaching material presentation pattern defines specific magnitudes related to difficulty, required time and dissimilarity of the teaching material elements.

14. (ORIGINAL) The program according to claim 10, wherein said questionnaire comprises first and second portions, and said second portion of said questionnaire is determined depending on an answer to said first portion of said questionnaire, and is provided after said first portion of said questionnaire is provided.

15. (CURRENTLY AMENDED) The program according to claim 10, wherein ~~the step of~~ providing a questionnaire and determining a trait comprises analyzing the answer to said questionnaire to further determine a trait of said user related to general life attitude.

16. (CURRENTLY AMENDED) The program according to claim ~~10~~15, wherein ~~the step of~~ providing a questionnaire and determining a trait comprises determining said trait of said user related to learning attitude in accordance with said personality trait and said trait of general life attitude.

17. (ORIGINAL) The program according to claim 10, wherein said teaching material element is a video clip.

18. (ORIGINAL) The program according to claim 10, wherein said information processing apparatus is connected to an information processing terminal over a network, and said questionnaire and said teaching material module are provided to said information processing terminal.

19. (CURRENTLY AMENDED) A method for adaptively presenting to a user a teaching material ~~in using~~ a computer-assisted education system which presents to the user a plurality of teaching material elements including text, video, and/or audio data, said method comprising ~~the steps of:~~

providing a questionnaire to a user and analyzing an answer to said questionnaire to

determine a trait of said user related to personality;

determining a teaching material presentation pattern for said user in accordance with the trait of said user;

selecting and editing ones of a plurality of teaching material elements of a specific subject in accordance with said teaching material presentation pattern for said user to generate a teaching material module, and presenting said teaching material module to said user in accordance with said teaching material presentation pattern; and

analyzing learning behavior of said user during a learning process of said user using said presented teaching material module, and modifying said teaching material presentation pattern in accordance with said analysis.

20. (CURRENTLY AMENDED) The method according to claim 19, further comprising: ~~the step of~~ retrieving said modified teaching material presentation pattern for said user from said second memory area, selecting and editing ones of said plurality of teaching material elements of said specific subject in said first memory area in accordance with said modified presentation pattern to generate another teaching material module, and presenting said other teaching material module to said user in accordance with said modified presentation pattern.

21. (ORIGINAL) The method according to claim 19, wherein said teaching material presentation pattern defines specific magnitudes related to difficulty, required time and dissimilarity of the teaching materials.

22. (CURRENTLY AMENDED) The method according to claim 19, wherein ~~the step of~~ providing a questionnaire and determining a trait comprises analyzing the answer to said questionnaire to further determine a trait of said user related to general life attitude.

23. (ORIGINAL) The method according to claim 19, wherein said teaching material module presented to said user is provided to an information processing terminal of said user.

24. (NEW) A computer-assisted education method for adaptively presenting teaching materials to a user, comprising:

presenting teaching materials based on information related to traits of the user; and  
analyzing learning behavior of the user during a learning process, wherein the teaching

materials are dynamically modified in accordance with the analysis.

25. (NEW) A computer-assisted education system for adaptively presenting teaching materials to a user, comprising:

- a processor for providing a questionnaire to a user;

- an input device for receiving a response to the questionnaire from the user based on which the processor determines a trait of the user related to personality, and determines a teaching material presentation pattern for the user;

- a storage device for storing the determined teaching material presentation pattern of the user; and

- a display unit to present a teaching material to the user in accordance with the determined teaching material presentation pattern, wherein the processor analyzes learning behavior of the user during a learning process and modifies the teaching material presentation pattern in accordance with the analysis, and stores the modified presentation in the storage device.
